For beginners, we highly recommend the following website and books: [www.photoshoptutorials.com](http://www.photoshoptutorials.com) Photoshop CS5 All-in-One For Dummies by Jeffrey Y. Hockenberry and Loren Schechter ## Shooting HD Video Up until now, we've been discussing digital photography — capturing an image by directly scanning the light into a computer, but what if you want to get more technical and cut your images out of a home movie? In video, you capture 16.9 million pixels into a computer, not an image, so you can capture more of the information that you need. With the right equipment, you can easily have an HD video camera shoot up to 1920 pixels high by 1080 pixels wide — more than enough to record the details in a single still image. When you want to change the image from video to still or go back and forth, you can use the video feature of a program such as Photoshop Elements. However, you need to attach the video files to the program. To really enjoy HD, you need a computer, a home theater system, and a capable video camera. A high-quality camera with more megapixels is important, as well as a video editing program that lets you navigate the material to view and edit the video with image data.
